Summary

Ambitious Electronics and Communication Engineering student specializing in Android app development, Python, and Data Analytics. Experienced in integrating Generative AI and building real-time IoT systems, with a strong foundation in team leadership and problem solving.

Education

HKBK College of Engineering Nov 2022 – Expected Jun 2026
Bachelor of Engineering in Electronics and Communication Engineering, CGPA: 7.6 — Bengaluru, Karnataka

RNS COMP Pre-University College Jun 2020 – Aug 2022
PCMC — Bengaluru, Karnataka

Experience

PESU Venture Labs Aug 2026 – Present
Full Stack Developer — Bangalore, Karnataka

- Built responsive full-stack features using React and Node.js, connecting user interfaces with reliable backend APIs.
- Collaborated with the venture team to test, debug, and deliver product improvements across frontend and backend workflows.

Edutainer (PAT Technologies Pvt. Ltd.) Jan 2026 – Jun 2026
UX Design & Game Design Intern — Bengaluru, Karnataka

- Designed user-friendly UI/UX concepts and interactive design elements through project-based learning and virtual collaboration.
- Collaborated with mentors and team members on live projects, gaining practical experience in wireframing, usability analysis, and interactive design workflows.

Technical and Soft Skills

Developer Tools: React, Node.js, Jupyter Notebook, Microsoft Excel, Power BI, Git

Languages: Python, SQL, C/C++, HTML

Technologies/Frameworks: Pandas, NumPy, Matplotlib, Seaborn, Figma, Adobe XT

Soft skills: Leadership, Team Management, Problem Solving, Public Speaking

Projects

Smart Agriculture Using LoRa and TinyML | *C/C++, ESP32, TensorFlow Lite* December 2025

- Developed a low-power, cloud-independent smart farming system using ESP32 microcontrollers and an ESP32-CAM to perform edge AI anomaly and disease detection directly on-device.
- Integrated an SX1278 LoRa module and TensorFlow Lite for Microcontrollers to transmit lightweight localized inference results to an offline Tkinter-based dashboard, bypassing internet dependencies.

QuestVerse | *Figma, UX Design, Game Design* March 2026

- Conceptualized and designed QuestVerse, an educational game-based learning application aimed at driving student engagement and retention through immersive gamification mechanics.
- Architected user-friendly navigation systems, high-fidelity dashboards, and interactive quiz interfaces, mapping out cohesive user flows from onboarding to reward redemption.

Prompt Engine | *React, HTML, CSS, Node.js, AI Models & APIs* 2026

- Built an AI-powered engine that interprets the intent behind a user's prompt and automatically rewrites it into a clearer, more AI-friendly version to improve response quality.
- Developed a responsive React, HTML, and CSS frontend and a Node.js backend integrating AI models and API keys to analyze intent and generate optimized, rephrased prompts in real time.

Certifications

Python Programming Certification

Advanced Java Certification

Achievements

Electrolython: National Level Hardware Hackathon | *Participant* October 2025

- Competed in a 10-hour national-level hardware hackathon organized by the Department of Electronics and Communication Engineering at CMR Institute of Technology.
- Designed and built a prototype focused on the Health Care & Bio-Medical Signal Processing theme, developing a practical, hardware-based solution under strict time constraints.
- Collaborated within a team to integrate hardware components, process signal data, and present the functioning prototype to a panel of expert judges.
