Summary

Software Engineer with hands-on experience building backend services and REST APIs in Node.js and Python, with a focus on AI and LLM-based systems. Electronics and Communication Engineering background in computer networking and embedded systems. Experienced in integrating LLMs into backend services, debugging across frontend and backend workflows, and building reliable systems under resource and network constraints. Looking to design and scale backend services in a fast-moving engineering team.

Experience

PESU Venture Labs Aug 2026 – Present
Software Engineer — Bangalore, Karnataka
- Built responsive full-stack features using React and Node.js, connecting user interfaces with reliable backend APIs.
- Collaborated with the venture team to test, debug, and deliver product improvements across frontend and backend workflows.

Edutainer (PAT Technologies Pvt. Ltd.) Jan 2026 – Jun 2026
UX Design & Game Design Intern — Bengaluru, Karnataka
- Designed user-friendly UI/UX concepts and interactive design elements through project-based learning and virtual collaboration.
- Collaborated with mentors on live projects, gaining hands-on experience in wireframing and usability analysis.

Technical Skills

Languages: Python, SQL, C/C++, JavaScript, TypeScript, HTML
AI / LLM: AI Model Integration, Prompt Engineering, AI Agents, Model Evaluation, Machine Learning, Edge AI (TensorFlow Lite)
Data: Pandas, NumPy, Matplotlib, Seaborn, Streamlit, Power BI
Backend & Tools: Node.js, Express, REST APIs, MongoDB, Docker, React, Git, Jupyter Notebook
Soft skills: Leadership, Team Management, Problem Solving, Public Speaking

Projects

Prompt Engine | *React, Node.js, Express, MongoDB, LLM APIs* 2026
- Built an AI-powered engine that interprets the intent behind a user's prompt and automatically rewrites it into a clearer, more AI-friendly version to improve response quality.
- Developed a React frontend and a Node.js/Express backend integrating LLM APIs to analyze intent and generate optimized prompts in real time, saving accepted prompts to MongoDB as a reviewable history.

DevLaunch | *TypeScript, Node.js, Docker, LLM APIs* 2026
- Built an AI-assisted deployment engine that clones an unfamiliar GitHub repository, generates a structured execution plan, and runs every service inside hardened Docker containers.
- Added rule-based stack detection with LLM-generated plans for unfamiliar stacks, readiness checks on ports, APIs and databases, and bounded automatic repair of failed services.

Smart Agriculture Using LoRa and TinyML | *C/C++, ESP32, TensorFlow Lite* 2025
- Developed a low-power, cloud-independent smart farming system using ESP32 microcontrollers and an ESP32-CAM to perform edge AI anomaly and disease detection directly on-device.
- Integrated an SX1278 LoRa module and TensorFlow Lite for Microcontrollers to transmit lightweight localized inference results to an offline Tkinter-based dashboard, bypassing internet dependencies.

Education

HKBK College of Engineering Nov 2022 – Jun 2026
Bachelor of Engineering in Electronics and Communication Engineering, CGPA: 7.3
Bengaluru, Karnataka

RNS COMP Pre-University College Jun 2020 – Aug 2022
PCMC — Bengaluru, Karnataka

Certifications

Python Programming Certification
Advanced Java Certification

Achievements

Electrolython: National Level Hardware Hackathon | *Participant* October 2025
- Competed in a 10-hour national-level hardware hackathon organized by CMR Institute of Technology (ECE Department).
- Built a hardware prototype for the Health Care & Bio-Medical Signal Processing theme under strict time limits and presented it to a panel of judges.
